Green River District
HEALTH DEPARTMENT

OVERDOSE IS MOST COMMON WHEN:

- Your tolerance is down due to not using whether you took a break, were in treatment, in jail or had cut down on your use.
- When you mix drugs, like downers, heroin, methadone, benzos/pills, and alcohol, or any combo of those.
- When you get stronger drugs than you are used to, if the supply changes, you go to a new dealer, or you are new in town.
- When you've been sick, tired, run down or dehydrated, your body cannot handle the drugs as well if it is not healthy and nourished.

SCAN ME

HOW TO RECOGNIZE AN OVERDOSE:

- Blue or grayish lips and fingernails.
- Clammy, sweaty skin.
- Shallow or raspy breathing, snoring or gurgling sounds.
- Won't wake up to yelling their name or to a sternum rub to the chest
- If your friend is just in a heavy nod, but is still conscious and breathing, make sure to stay with them, walk them around, keep them talking and moving.
- **WATCH THEIR BREATHING!**
- Someone can slip into an overdose hours after they get high.

270.686.7747
www.healthdepartment.org

NALOXONE CAN WEAR OFF IN 30-45 MINUTES.

- Lay them on their side.
- Stay with them until they go to the hospital or until the Naloxone wears off to make sure the overdose does not come back.
- **DO NOT LEAVE THEM ALONE.**
- Contact a family member to let them know their loved one has overdosed and EMS is taking them to E.R.

PREVENTING OVERDOSE:

- Don't mix drugs. Mixing drugs can cause your breathing and heart to stop.
- Have an O.D. rescue plan with those around you.
- Learn rescue breathing and get a Naloxone Kit.
- Do not use alone.
- Keep doors unlocked so help can reach you if you are in trouble.
